

## PDO THREAD LIFT & FACE LIFT

# COMPARISON CHART

### SURGICAL FACE-LIFT

#### How it Works?

Treats wrinkles and sagging excess skin through a surgical method. The procedure will generally involve making incisions near the ear, then lifting the skin to tighten muscles and remove fat before removing excess skin and stitching your skin back together.

#### EFFECTS LAST FOR?

Up to 10 years.

#### DOWNTIME?

2 weeks of downtime, 2-3 months of settling time.

#### Benefits?

Lift lasts a long time, wrinkles and sagginess are corrected, dramatic results.

#### Complications/Risks?

Invasive surgeries have considerable risks including possible infection, nerve damage, and permanent or unnatural change of look. Visible scarring and extensive post-procedure care. Surgical procedure requiring general anesthesia, hospital stay, and pain management.

### NON-SURGICAL PDO THREAD LIFT

#### How it Works?

Treats wrinkles and sagging skin through a non-surgical method. PDO Threads are absorbable sutures that are pre-loaded in a needle, it is inserted under the skin, needle is removed and threads remains inside for 4-6 months. The barbs on the thread allow for instant lifting and stimulates collagen production.

#### EFFECTS LAST FOR?

1-2 years

#### DOWNTIME?

No Downtime, often called the "lunchtime procedure". Very minimal bruising and swelling.

#### Benefits?

Natural and immediate results, stimulates collagen production for lasting effects, shorter recovery & procedure time.

#### Complications/Risks?

Minimally invasive procedure - no cuts or incisions, only injections with blunted tip cannulas. Minimal swelling and bruising. Poor technique can lead to irregularity of skin or asymmetry, however, these resolve within 2 weeks.
